DYNAMIC

FLUID COMPONENTS, INC.

Dynamic Fluid Components, Inc. is pleased to present our extensive line of products for the hydraulic, pneumatic, process, petrochemical and other allied industries. Our wide selection of hydraulic gear pumps, low speed high torque motors, gear motors, pressure gauges and valves are offered at highly competitive prices with fast shipping to keep your business running smoothly. At Dynamic, quality assurance is the top priority. Our products are produced under the most stringent manufacturing conditions while supported by an advanced test and development facility.

The Dynamic Fluid Components' warehouse located in West Union, South Carolina offers most of the catalog products in stock and available for immediate shipping. Our extensive network of distributors and representatives are ready to serve you.

General Information

Pressure Gauges

The maximum working pressures of standard gauges should not exceed 75% of full scale for constant pressure applications, or 66% of full scale for pulsating pressures. Normal overpressures allowed are: 1.25 times FSV for ranges up to 1,000 psi; 1.15 times FSV for ranges between 1,000 and 10,000 psi; 1.10 times FSV for higher pressures. Dial face includes both psi (black) and bar (red) scales. PSI only faces may be available. To see standard increments and dial faces, see pages 123-124.

Glycerine is used as standard in most Dynamic fluid-filled gauges. Neither glycerine nor silicone should be used in applications involving oxygen, chlorine, nitric acid, hydrogen peroxide or other oxidizing agents.

All Dynamic gauges come with a standard polycarbonate lens. Safety glass or tempered glass covers are available with minimum order. Dynamic filled gauges include a dual relief valve/blowout disc for operating safety.

Test Points

The need for preventative maintenance of hydraulic systems in general has added to the use of test points throughout the system. This need is answered by the installation of a range of test points, plugs and probes, which can be connected under full system pressure to 6000 psi. Where the introduction of test points is needed, and the hydraulic system uses flexible hydraulic hoses, Dynamic has a range of hose couplings fitted with test points. For full product data consult pages 16-18.

Gauge Snubbers

By fitting with a snubber, a pressure gauge is protected from harmful pressure surges and pulsations which would otherwise overload the gauge mechanism.

The snubber has a helically formed oilway with a small orifice through which fluid must pass to reach the gauge. This provides high resistance to smooth out surges and pulses, yet allows rapid responses and steady gauge readings.

Available Models

PDD-4B	1/4" NPT
PDD-4-04SAE	7/16-20UNF (SAE-04)

Adjustable Gauge Snubber / Shut-Off Valve

Our adjustable snubbers allow you to throttle and/or shut-off flow to protect hydraulic gauges from pressure spikes in your system and reduce pointer vibrations.

Features

- Zero leakage at shutoff
- Locknut prevents accidental adjustments
- Optional SAE threads allow knob to be positioned in any direction

Materials

- Zinc plated steel body with 316SS stem
- Buna-N Seals standard (Viton optional)

Gauge Protectors

Dynamic recommends the use of our rubber housing gauge protector on our standard 2 1/2" stem mount & center back mount, liquid-filled gauges (styles "A" or "D"). This saves damage to the gauge should it be dropped or bumped.

Weight: 0.10 lbs

Order by Model #: GP-40N

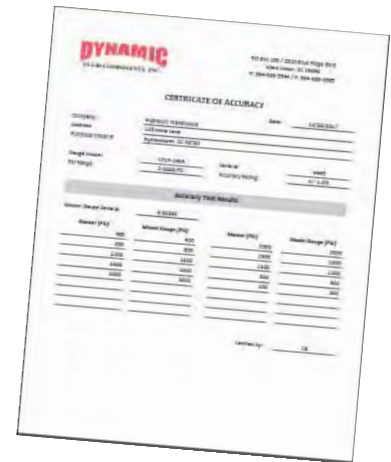

Certificate of Accuracy

Dynamic offers in-house generated certificates of accuracy for all gauges up to 10,000 psi. Gauges are tested against a calibrated Test Gauge with .6% accuracy and the pressure of both gauges is documented at predetermined increments from 0 psi to maximum pressure then back to 0 psi. Customers are provided with a certificate documenting all pressure readings, as well as the serial number which matches the gauge tested.

Certificates of Accuracy produced at Dynamic Fluid Components do not conform with ANSI or NIST standards. Should this additional level certification be required, the customer would need to obtain it independently from a third-party source.

To order, add "Certificate of Accuracy" as a separate line item.

There is a set fee per gauge for these certificates.

Test Point Plugs

DGA1620 Series - M16 x 2.0

Test Point Probe

DGA1620 Test Point Probes are designed to connect directly to the D1620 Test Point Plugs (above). When fitted with the desired pressure gauge, the system pressure is released into the gauge's bourdon tube as the probe opens the test point valve. It can be connected and disconnected under pressure. This provides a precise means to monitor system pressure without turning the system off. Weight: 0.15 lbs

Model #: DGA1620 Test Point Probe*

Gauge Protectors

Dynamic recommends the use of a gauge protector Buna N rubber housing when using a test point probe. This saves damage to the gauge should it be dropped or bumped during the test proceedings. Gauge Protectors can be ordered using model #: GP-40N. See page 15.

*Test Point Probe does not include gauge.

Features

- 6,000 psi Working Pressure
- Fitted with Test Point Plug
- Can be used with direct or remote test probes
- J.I.C. 37° Hose Connection
- Can be connected and disconnected at full system pressure

Install J.I.C. Hose Couplings between the female swivel nut of the flexible hose and the fixed male connection. The integrated test point may be used with Dynamic test probes and/or test kits to obtain random pressure and temperature checks during servicing or fault finding. Fluid sampling probes are also compatible.

All probes may be connected and disconnected at full pressure without fluid loss or ingress of dirt.

Hose Assemblies

Dynamic hose assemblies are designed for use with Dynamic test plugs, pipe couplings and pressure gauges. Together, they facilitate pressure readings on a random basis throughout a hydraulic system. Probes may be connected or disconnected with the system at full working pressure without loss of oil or ingress of dirt. Use of test points saves the installation of multiple pipework and gauges.

Test Hose OD: 5mm / ID: 2mm

Hydraulic oil must flow into valve through port "1".
The valve can only be sealed under one of two conditions:
1) Pressure at the closed port is zero;
2) Pressure at the closed port is lower than at the two open ports.

Pressure Compensating Variable Flow Control

Model DFC-51 is a full-range pressure compensating variable flow control. It is designed so that the orifice area varies as the lever is rotated. The outlet flow is smooth and constant regardless of the pressure on the control flow or excess flow ports. An adjustable ball spring relief allows for pressure compensated flow up to the pressure setting on the relief with accuracy to 150psi. Relief valves are preset at 2100 psi and field adjustable from 75 to 3000 psi. Weight: 9.00 lbs.

Model DSV

Selector Valve

The DSV 12-volt DC selector valve is operated by a continuously rated wet pin solenoid. This is capable of switching from one circuit to another at a variety of flows and pressures. The DSV may be connected to the service ports of a directional control valve and used to direct service line flow to and from either of two separate devices. If more than two circuits are to be controlled, additional units can be stacked together (max of 3), minimizing the need for pipes and fittings. Also the DSV series valves can be connected to a pump and used to direct the flow to either one of two different circuits.

Model JPLS-3000

Log Splitter Control Valve

Model JPLS-3000 offers a hydraulically-balanced, chrome-plated spool and pressure release detent adjustable from 1000 to 2000 psi. Recommended for systems with flows up to 25 gpm, the JPLS-3000 relief valve is adjustable up to 2750 psi. When the tandem center spool is in neutral position, hydraulic flow is diverted to the return line. This is used to hold the cylinder/piston in position with no load on the pump, keeping wear and tear on the pump to a minimum.

Technical Specifications

- Max Operating Pressure: 2750 psi
- Max Tank Pressure: 150 psi
- Max Flow Rating: 25 gpm
- Relief Valve Setting: 2250 psi
- Recommended Filtration: ISO 4406 19/17/14
- Max Operating Temperature: 180°F
- Standard Port Size: 3/4" NPT / 1/2" NPT
- Weight: 10 lbs

In exposed applications, do not mount with spool vertical and handle down.

Model FDA Gear Flow Divider

Model FDA is a rotary gear flow divider with 6 displacements from .129 to .517 in³/rev (2.13 to 8.42 cm³/rev). Maximum flow rates of 2.5 to 8.5 gpm are available across the displacement range. Standard ports are SAE, sizes are noted in the data chart below. Relief preset at 3000psi. Aluminum body.

Recommended working conditions:

- FILTRATION: 25 micron or better
- OIL VISCOSITY: 6 - 200 cSt
- OIL TEMPERATURE: -25° - 80° C (-12° - 175° F)
- AMBIENT -22° - 55° C (-8° - 130° F)

Technical Specifications

Specifications based on using Petroleum oil at 120°F (49°C), viscosity 150 SUS at 100°F and 0 inlet pressure.

Quick Disconnect Flush Face Couplings

Flush Face Hydraulic Couplings are widely used in the public utility market where hydraulic oil spillage can constitute a serious safety hazard. For use in hammer circuits and high pressure pulse applications. Flush Face couplings are also used for the quick change of hydraulic tools in construction, railway, maintenance and mining industries and are commonly found on excavators and skid steer loaders.

Materials

- Zinc / Zinc-Nickel-plated Carbon Steel Body
- Standard Nitrile NBR Seals with PTFE Back-up Ring

Features

- Conforms to the ISO16028 Standard
- One-handed operation makes connection and disconnection easy with less fluid loss
- Locking sleeve ensures solid connection and prevents accidental disconnection
- Flush Face valving is easily wiped clean and reduces the introduction of air and contaminants during connection and when in use
- Design resists damage from high pressure pulse applications
- Working temperature: -13°F to +257°F with standard seal

FLUID COMPONENTS, INC.

Quick Disconnect ISO B Couplings

ISO B Couplings are used across the spectrum of hydraulic applications. Their general solidity permits the strenuous applications in semi conductor industry, pneumatic and hydraulic hand tools, food and bottling industries, boating, shipbuilding, offshore rigs, pharmaceutical industry, transport, hydro-electric power stations, etc.

Materials

- Zinc-plated Carbon Steel or Brass (Stainless Steel via special order)
- Standard Nitrile NBR Seals with PTFE Back-up Ring

Features

- Built in accordance with standard ISO7241-1B
- A variety of metal options allow for use with most fluids.
- Poppet valve allows for larger flow.
- Locking ball system allows quick connection & disconnection.
- Bi-directional flow
- Working temperature: -13°F + 257°F with standard seal

Quick Disconnect Wing Nut Couplings

Wing Nut Hydraulic Couplings are mainly applied in wet line kits, dump trailers, submersible pumps, engine test stands and lines of oil and gas field equipment.

Materials

- Brass Body with Zinc-plated Carbon Steel Wing
- Standard Nitrile NBR Seals with PTFE Back-up Ring

Features

- Corrosion resistant brass body makes this coupling compatible with a broad range of media and provides versatility.
- Wing nut sleeve and hex nut design allows for connection by hand
- Screw system allows for connection either with male or female side under pressure.
- Working temperature: -13°F + 257°F with standard seal

General Information

Dynamic offers a full range of pressure-balanced, fixed-displacement gear pumps with displacements ranging from .009 to 9.85 in³/rev. The range includes F0 and F1 all aluminium gear pumps, as well as our standard F10, F20 and F25 gear pumps constructed with aluminium center gear sections and cast iron mounting flanges and end plates. Also available are all cast iron HI/LO pumps with 14 displacement combinations, ideal for log-splitter applications, as well as side and rear ports PTO pumps for 540 and 1000 rpm applications.

Hydraulic Gear Pump Model GP-F0

Available by Special Order Only

Model GP-F0 is an all aluminium construction, high pressure mini hydraulic gear pump with 12 displacement sizes from 0.009 - 0.120 in³/rev. (0.16 - 2.00 cm³/rev). The standard mounting flange is as detailed on the installation drawing and porting is any combination of rear, front or side as defined in the Ordering Example.

Recommended working conditions:

- FILTRATION: 25 micron or better
- OIL VISCOSITY: 7 - 700 cSt
- INLET PRESSURE: 12 - 32 psi absolute
- OIL TEMP: -25° - 80° C (-12° - 175° F)
- AMBIENT -22° - 55° C (-8° - 130° F)

APPENDIX

Hydraulic Gear Pump Model GP-F10

Constructed of an aluminium center section and cast iron end plates, model GP-F10 is a high pressure hydraulic gear pump with 8 displacement sizes from 0.07 - 0.48 in³/rev. (1.3 - 8.0 cm³/rev). The standard mounting flange is a SAE AA - 2 bolt; standard ports are SAE-8 inlet and SAE-6 outlet; and the drive shaft is a 1/2" diameter straight shaft with 1/8" key.

Recommended working conditions:

FILTRATION: 25 micron or better
OIL TEMP: -25° - 80°C (-12° - 175°F)

OIL VISCOSITY: 7 - 700 cSt
AMBIENT TEMP: -22° - 55°C (-8° - 130°F)

Hydraulic Gear Pump Model GP-F25

Constructed of an aluminium center section and cast iron end plates, model GP-F25 is a high pressure hydraulic gear pump with 10 displacement sizes from 1.34 - 5.43 in³/rev (22 - 89 cm³/rev). The standard mounting flange is a SAE B - 2-bolt with a 7/8" diameter straight shaft and 1/4" key.

Recommended working conditions:

FILTRATION: 25 micron or better
OIL TEMP: -25° - 80°C (-12° - 175°F)

OIL VISCOSITY: 7 - 700 cSt
AMBIENT -22° - 55°C (-8° - 130°F)

INLET PRESSURE: 12 - 32 psi absolute

Hydraulic Gear Pumps Double & Triple Pumps

Dynamic gear pump models GP-F10, GP-F20 and GP-F25 are available with features that allow pumps to be stacked to produce double and triple pumps from the base model. Technical data, including displacement sizes, working pressure, rated speed, etc. is as per the first pump position pump model. For example model GP-F20D-12/08-S9-C is a double pump with displacements of 12 and 8 cm³/rev (.73 and .48 in³/rev) rated at 2000 rpm and 2900 psi with a 9-tooth spline drive shaft and clockwise rotation.

Recommended working conditions:

- FILTRATION: 25 micron or better
- OIL VISCOSITY: 7 - 700 cSt
- INLET PRESSURE: 12 - 32 psi absolute
- OIL TEMPERATURE: -25° - 80° C (-12° - 175° F)

Hydraulic Gear Pump Model GP-CBN

Model GP-CBN is a HI/LO hydraulic gear pump with 12 displacement combinations with maximum pressures of 900 psi for the low pressure pump and 3000 psi for the high pressure pump. The change from LO to HI pressure is automatic with the LO pressure preset at approx. 450 psi (adjustable from 400 to 900 psi - screw in to increase and out to decrease). The HI/LO pump is all cast iron. Applications for HI/LO pumps include log splitters, presses, etc. where rapid movement of the cylinder at low pressure is required prior to automatically switching to the high pressure mode to meet load requirements.

Recommended working conditions:

FILTRATION: 25 micron or better
OIL TEMP: -25° - 80° C (-12° - 175° F)

OIL VISCOSITY: 7 - 700 cSt
AMBIENT -22° - 55° C (-8° - 130° F)

Dynamic Fluid Components offers an extensive range of Low Speed High Torque (LSHT) **ROTORTORC™** and **ROLORTORC™** Hydraulic Motors.

Dynamic motors are manufactured in accordance with ISO 9000-2000 quality standards and have been accepted world wide as a competitively priced, high-quality product. These motors are interchangeable with many leading domestic and European manufacturers. Performance-driven, these products are available from stock throughout the North American market from our extensive distributor network.

USER GUIDE

For optimal utilization of these motors the following is recommended.

1. Normal oil operating temperature should be 70 to 150°F (20 to 60°C).
2. Maximum operating temperature should not exceed 190°F (90°C).
3. Filtration level per ISO Cleanliness Code level 18/3.
4. Minimum oil viscosity should be 100 SUS.
5. Motors should be operated at less than 30% of rated performance for the first hour of operation.
6. Simultaneous maximum torque and maximum speed is NOT recommended.

TECHNICAL DATA

Dynamic motors are offered with either a **ROTORTORC™** or **ROLORTORC™** gear set. The Rotortorc™ gear set employs an interlocking set of teeth making them suitable for long operating periods at moderate pressures or short operating periods at high pressures. Rolortorc™ gear sets have rollers added to the outer ring which act as a roller bearings, reducing friction and wear and increasing mechanical efficiency. This extends the operating life and provides better efficiency at continuous high pressures. The BMMZ & BMPH models use the Rotortorc™ design, while the BMRS, BMSY, BMH, BMT, BMV, BMER-2 and BMK6 use the Rolortorc™ design.

BMMZ Technical Data

Shaft Seal Rated Pressure

Case Drain

In applications without a motor drain line, the pressure exerted on the shaft seal is marginally in excess of the return line pressure. When the drain line is used the pressure exerted on the shaft seal is equal to the return line pressure.

Shaft Rotation Direction

Radial Forces

$$F_r = \frac{13040}{61.5 + L}$$

F_r = Radial Force (daN)
 L = Distance (mm)
 n = Speed (rpm)

Rhomb Flange $L=15\text{mm}$
 Square Flange $L=20\text{mm}$

Hydraulic Motor Model BMPH

The BMPH Rotortorc™ gear set, shaft distribution flow, hydraulic motor is a compact, highly efficient, low speed-high torque design which can be used in either parallel or series systems. These low weight advanced construction design motors are manufactured in accordance with the requirements of the ISO 9000-2000 quality system.

BMPH Technical Data

Shaft Seal Rated Pressure

Case Drain

In applications without a motor drain line, the pressure exerted on the shaft seal is marginally in excess of the return line pressure. When the drain line is used, the pressure exerted on the shaft seal is equal to the return line pressure.

Shaft Rotation Direction

Radial Forces

Status of the shaft's radial force

$$F_r = \frac{800}{n} * \frac{25000}{95 + L}$$

F_r = Radial Force (daN)
 L = Distance (mm)
 n = Speed (rpm)

Rhomb Flange $L=30\text{mm}$
 Square Flange $L=24\text{mm}$

FLUID COMPONENTS, INC.

Hydraulic Motor Model BMRS

The BMRS series advanced **ROLORTORC™** gear set, shaft distribution flow, hydraulic motor is a compact, low noise, high efficient high torque low speed design. The **ROLORTORC™** gear set also affords a reliable smooth start up at low pressure. BMRS motors are available with optional radial needle bearings (by special order) for side load applications.

The low weight advanced construction design is manufactured in accordance with the requirements of ISO 9000-2000 quality system.

BMRS Technical Data

Shaft Seal Rated Pressure

Case Drain

In applications without a motor drain line, the pressure exerted on the shaft seal is marginally in excess of the return line pressure. When the drain line is used, the pressure exerted on the shaft seal is equal to the return line pressure.

Shaft Rotation Direction

Radial Forces

Status of the Shaft's Radial Force

$$F_r = \frac{800}{n} + \frac{25000}{95 + L}$$

F_r = Radial Force (daN)
 L = Distance (mm)
 n = Speed (rpm)

Rhomb Flange $L=30\text{mm}$
 Square Flange $L=24\text{mm}$

Hydraulic Motor Model BMSY

The BMSY series motor adapts the advanced **ROLORTORC™** gear set design with **DISC** distribution flow and high pressure. These motors can be supplied with various options for multifunctional operations in accordance with the application requirements. The output shaft tapered roller bearings permit high axial and radial forces offering a smooth operation during low pressure start up and high pressure operation.

These low weight advanced construction design motors are manufactured in accordance with the requirements of the ISO 9000-2000 quality system.

Shaft Seal Rated Pressure

Case Drain

In applications without a motor drain line, the pressure exerted on the shaft seal is marginally in excess of the return line pressure. When the drain line is used, the pressure exerted on the shaft seal is equal to the return line pressure.

Shaft Rotation Direction

The output shaft runs tapered bearings that permit high axial and radial forces, Curve "A" shows max radial shaft load, Any shaft loads exceeding the values quoted in the curve will involve risk of breakage. The two other curves apply to a B10 bearing life of 3000 hours at 200 rpm.

FLUID COMPONENTS, INC.

Hydraulic Motor Model BMH

The BMH series advanced **ROLORTORC™** gear set, shaft distribution flow, hydraulic motor is a compact, low noise, high efficient high torque low speed design. The **ROLORTORC™** gear set also affords a reliable smooth start up at low pressure. The special design of the valve linkage and high pressure capability of the shaft seal provides a long operating life and these motors can be used in either series or parallel operation.

The low-weight, advanced-construction design is manufactured in accordance with the requirements of ISO 9000-2000 quality system.

Hydraulic Motor Model BMER-2 Crossover to White 500/530 Series

The BMER-2 series motors adapt the Geroler gear set design with high speed distribution flow and high pressure. These motors can be supplied with various options for multifunctional operations in accordance with the application requirements. The output shaft tapered roller bearings permit high axial and radial forces offering a smooth operation during low pressure start up and high pressure operation.

These low weight advanced construction design motors are manufactured in accordance with the requirements of the ISO 9000-2000 quality system.

BMER-2 Technical Data

Shaft Rotation Direction: Reverse Timed

- When looking at the shaft end of motor, shaft will rotate:
- Clockwise when port "B" is pressurized.
 - Counter-clockwise when port "A" is pressurized.

NEW Increased Radial Load Capacity!

Hydraulic Motor

Model BMER-4

Crossover to White 520/521 Series

NEW Higher Side Load Capacity!

- High Speed Distribution Flow
- Distribution Range:
7.20 in³/rev to 45.45 in³/rev
- Wheel & Magneto Mount Options
- Extended Shafts Standard

The BMER-4 series motors adapt the Geroler gear set design with high speed distribution flow and high pressure. These motors can be supplied with various options for multifunctional operations in accordance with the application requirements. The output shaft tapered roller bearings permit high axial and radial forces offering a smooth operation during low pressure start up and high pressure operation.

These low weight advanced construction design motors are manufactured in accordance with the requirements of the ISO 9000-2000 quality system.

Consult website, www.dynamicfc.com, for full motor specifications and details.

BMT Technical Data

Shaft Seal Rated Pressure

Case Drain

In applications without a motor drain line, the pressure exerted on the shaft seal is marginally in excess of the return line pressure. When the drain line is used, the pressure exerted on the shaft seal is equal to the return line pressure.

Shaft Rotation Direction

Axial and Radial forces

The output shaft runs tapered bearings that permit high axial and radial forces, Curve "A" shows max radial shaft load, Any shaft loads exceeding the values quoted in the curve will involve risk of breakage. The two other curves apply to a B10 bearing life of 3000 hours at 200 rpm.

FLUID COMPONENTS, INC.

Hydraulic Motor Model BMV

The BMV series motor adapts the advanced **ROLORTORC™** gear set design with **DISC** distribution flow and high pressure. These motors can be supplied with various options for multifunctional operations in accordance with the application requirements. The output shaft tapered roller bearings permit high axial and radial forces offering a smooth operation during low pressure start up and high pressure operation.

These low weight advanced construction design motors are manufactured in accordance with the requirements of the ISO 9000-2000 quality system.

BMV Technical Data

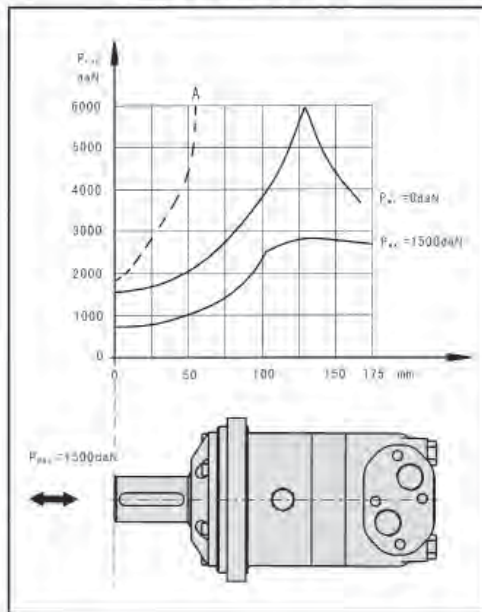

Shaft Seal Rated Pressure

Shaft Rotation Direction

Axial and Radial forces

The output shaft runs tapered bearings that permit high axial and radial forces, Curve "A" shows max radial shaft load, Any shaft loads exceeding the values quoted in the curve will involve risk of breakage. The two other curves apply to a B10 bearing life of 3000 hours at 200 rpm.

FLUID COMPONENTS, INC.

Hydraulic Motor Model BMK6

Crossover to Char-Lynn® 6000 Series

The BMK6 series motor adapts the advanced **ROLORTORC™** gear set design with **DISC** distribution flow and high pressure. These motors can be supplied with various options for multifunctional operations in accordance with the application requirements. The output shaft tapered roller bearings permit high axial and radial forces offering a smooth operation during low pressure start up and high pressure operation.

These low weight advanced construction design motors are manufactured in accordance with the requirements of the ISO 9000-2000 quality system.

BMK6 Technical Data

Shaft Seal Rated Pressure

Case Drain

In applications without a motor drain line, the pressure exerted on the shaft seal is marginally in excess of the return line pressure. When the drain line is used the pressure exerted on the shaft seal is equal to the return line pressure.

Shaft Rotation Direction

BMK6 for CC Mounting Radial forces

The bearing curve represents allowable bearing loads for an B10 bearing life (2000 hours or 12×10^6 revolutions at 100rpm) at rated output torque. Other speed load multiply a load values.

The maximum load curve is defined by bearing static load capacity.

This curve should not be exceeded at any time including shock loads.

DYNAMIC

FLUID COMPONENTS, INC.

Hydraulic Gear Motor

Model GM-F20

Available by Special Order Only

The GM-F20 Gear Motor is constructed of an aluminum gear body and end plates and is available in 11 displacement sizes from 0.24 - 1.52 in³/rev (4 - 25 cm³/rev). The standard mounting flange is SAE "A" 2-bolt. The standard drive shaft is a 5/8" diameter straight shaft with a 5/32" key - other shaft options available as outlined in Ordering Example.

Recommended working conditions:

FILTRATION: 25 micron or better
OIL TEMP: -25° - 80° C (-12° - 175° F)

OIL VISCOSITY: 6 - 200 cSt
AMBIENT -22° - 55° C (-8° - 130° F)

INLET PRESSURE: 12 - 32 psi absolute
